- AISI 304L scotch bright finishing stainless steel panels, with two 8mm tempered glass doors. Two interlocking electrically operated doors ensure the separation of the two environments
- Removable tray for cleaning operations
- On both sides a green light shows when the door can be opened by pressing the button
- Working procedure: the first operator pushes the button to open the door on side "A"; the interlocking device automatically keeps the other door on side "B" locked. The items are inserted and the first operator closes the door. On side "B" the green light switches on: the second operator can now push the button and open the door to take the items. In this phase the door on side "A" is locked.
